## Ⓝ **Three Trials**   ✎ ⬈ N

1. Carlos rolled his car down the ramp three times. The first time it rolled 35 links. The second time it rolled 31 links. The third time it rolled 32 links. What is a good measurement for Carlos to record in his data table for the distance his car rolled? Why?

2. Sheila's car rolled the following distances in three trials: 17 links, 19 links, and 19 links. What distance should she record in her data table?

Ⓞ **Group and Share**   ✳ N

1. Group twenty cubes into three parts. The parts do not need to have the same number of cubes. Use all 20 cubes. Fill in the diagram. Write a number sentence that describes your cubes.

_____

2. Share twenty cookies fairly with three people. How many leftovers do you have? Draw a picture to show how you decided.
