

# Group and Count

Dear Family Member:

In class, we are counting by grouping objects in tens and leftover ones. You can help provide additional practice for your child by gathering a collection of objects and setting it out for your child to group and count. Change the total number of objects at least two times. Some ideas for objects to use are cereal pieces, nuts, pasta, raisins, pennies, buttons, and marbles. There should be 40–70 objects each time your child groups and counts.

Thank you.

**Find objects to count. Ask an adult or an older sister or brother to help you.**

Object	Number of Groups of 10	Number of Ones	Number
