

Student Activity Book

The Children Who Traveled to Find a Hard Problem (SAB pp. 458–459)

Dinner Guests

* 20 plates; $16 + 4 = 20$ (Possible response: I counted on: 17, 18, 19, 20)

Shepherd

* 6 sheep: $18 - 12 = \boxed{6}$ or $12 + \boxed{6} = 18$

Show your work.

The family needs _____ plates.

Student Activity Book - Page 458

Name _____ Date _____

Shepherd

Jack and Tess set out from home in search of a hard problem. Soon they came to a shepherd who was sitting with 18 sheep by the roadside. The poor shepherd was crying. Jack asked what was the matter.

The shepherd said, "I have a really hard problem. I am watching 18 sheep for Farmer Bob and Farmer Dan. I know that Bob gave me 12 sheep, but I'll never figure out how many Dan gave me: it's too hard!"

Show your work.

Dan gave the shepherd _____ sheep.

Solve Problems with Larger Numbers
 Estimate the answer to each problem. Circle an interval. Show or tell how to solve each problem. Write a number sentence with your answer.

1. Jack solved a problem for the shepherd. The shepherd was very happy. He said to Jack, "I will give you 14 pennies today and 6 pennies tomorrow." How many pennies will the shepherd give to Jack altogether?

The answer will be between 1 and 10 11 and 20 21 and 30 31 and 40

Use Strategies to Solve Problems
Homework

Dear Family Member:
We have been solving word problems using different strategies. Please read the problems below to your child. For each problem, have your child tell you his or her strategy for solving it. Your child may use ten frames, counters, or drawings. Thank you.

Show or tell how to solve each problem. Write a number sentence with your answer.

1. Jack and Tess help Father plow the field in the spring. One day Tess and Father plowed 26 rows. The next day Jack and Father plowed 4 rows. How many rows did they plow in the two days?

Use Strategies to Solve Problems (TG pp. 1–2)

Homework Questions 1–3

Strategies will vary. Possible strategies are indicated for each problem.

- $26 + 4 = 30$ (Possible strategy: I filled 2 ten frames with 20. Then I placed 6 in the next ten frame and 4 more. Six and 4 make 10. I filled 3 ten frames. That makes 30.)
- $50 + 4 = 54$; (Possible strategy: I used the number line. I started at 50 and counted 4 more. I landed at 54.)
- $36 - 7 = 29$; (Possible strategy: I used the ten frames. I filled 3 ten frames and that made 30 and I placed 6 more dots in the next ten frame to make 36. To subtract 7, I took away the 6 and 1 more and I got 29.)
