

School Bus Measurements

Dear Family Member:

Students have been measuring distances using centimeters, meters, feet, and yards. Help your child visualize the size of these units as they estimate. A meter is 100 centimeters. A yard is about the same size as a meter. A foot is about the size of this page.

Thank you.

1. Carla and Rosa measured objects they found on a school bus but forgot to label the units. Circle the appropriate unit.

Object Measured	Length	Unit	
A. Size of buckle	3	inches	feet
B. Seatbelt strap length	4	feet	yards
C. Length of bus	11	centimeters	meters
D. Length of 1 window	50	centimeters	meters
