

Student Activity Book

Volume Problems (SAB pp. 575–578)  
Questions 1–4

1. **A.\*** 14 cc; Possible responses:  
 $94 \text{ cc} - 80 \text{ cc} = 14 \text{ cc};$   
 $80 \text{ cc} + \square \text{ cc} = 94 \text{ cc}$  or  
 $80 \text{ cc} + 14 \text{ cc} = 94 \text{ cc}$
- B.\*** 49 cc; shading should show water level of 49 cc
- C.\*** 36 cc;  $50 - 14 = 36 \text{ cc};$   
 $50 \text{ cc} = \square + 14 \text{ cc}$  or  
 $36 \text{ cc} + 14 \text{ cc} = 50 \text{ cc};$  the arrow should point to 36 cc

- 2.\* 75 cc; Strategies will vary. Possible response:  
 $50 \text{ cc} + 25 \text{ cc} = 75 \text{ cc}$

**Volume Problems**

1. Sara dropped the same rock in each graduated cylinder below. The arrow shows the starting level of the water.

**A.** What is the volume of the rock?  
Number sentence \_\_\_\_\_

**B.** Sara moved the rock to this graduated cylinder. What is the total volume of the water and the rock in the cylinder?  
Show the total volume. Shade the graduated cylinder.

**C.** Sara moved the rock to this graduated cylinder. What was the starting level of the water in the graduated cylinder?  
Draw an arrow to show the water level before the rock was added.

3. Natasha has two objects. One object has a volume of 15 cc. The other object has a volume of 18 cc. She placed both objects in 60 cc of water.

What is the total volume in the graduated cylinder? Shade the graduated cylinder. Write a number sentence for the total volume.

Problem Solving with Volume SAB • Grade 2 • Unit 11 • Lesson 5 577

- 3.\* 93 cc; Strategies will vary. Possible responses:  
 $15\text{ cc} + 18\text{ cc} = 33\text{ cc}$  and  
 $33\text{ cc} + 60\text{ cc} = 93\text{ cc};$   
 $15\text{ cc} + 18\text{ cc} + 60\text{ cc} = 93\text{ cc}$

Student Activity Book - Page 577

4. Levi put 40 cc of water and two objects into a graduated cylinder. He knows that the volume of Object A is 6 cc. The volume of both objects and the water is 65 cc. Jim said, "I can figure out the volume of Object B without taking Object A out."

Help Levi show his thinking by answering each question.

A. What is the total volume in the graduated cylinder? \_\_\_\_\_

B. What is the volume of water and Object A? \_\_\_\_\_

C. What is the volume of Object B? \_\_\_\_\_

D. Find the volume of Object B a different way. Explain your thinking.

578 SAB • Grade 2 • Unit 11 • Lesson 5 Problem Solving with Volume

4. A.\* 65 cc  
 B.\* 46 cc  
 C.\* 19 cc  
 D.\* Responses will vary. Two possible solutions follow:  
 I subtracted the volume of Object A from the total volume in the graduated cylinder:  
 $65\text{ cc} - 6\text{ cc} = 59\text{ cc}.$   
 That shows the volume of Object B and the water together, so I subtracted the starting volume of the water from that to get the volume of Object B:  
 $59\text{ cc} - 40\text{ cc} = 19\text{ cc}.$   
 I subtracted the starting volume of water from the total volume in the graduated cylinder,  $65 - 40 = 25\text{ cc}$ , then subtracted the volume of Object A,  
 $25\text{ cc} - 6\text{ cc} = 19\text{ cc}.$

**Volume Math Check (SAB pp. 579–583)**

**Questions 1–7**

1. 5 cc; number sentences will vary. One possible number sentence is:  $25\text{ cc} - 20\text{ cc} = 5\text{ cc}$ .
2. 45 cc; Possible responses:  
 $92\text{ cc} - 47\text{ cc} = 45\text{ cc}$ ;  $47\text{ cc} + \square = 92\text{ cc}$  or  
 $47\text{ cc} + 45\text{ cc} = 92\text{ cc}$
3. 39 cc; Possible responses:  $47\text{ cc} + \square = 86\text{ cc}$   
or  $47\text{ cc} + 39\text{ cc} = 86\text{ cc}$ ;  
 $86 - 47 = 39\text{ cc}$
4. 32 cc; Possible response:  $94\text{ cc} - 27\text{ cc} = 67\text{ cc}$   
and  $67\text{ cc} - 35\text{ cc} = 32\text{ cc}$
5. A. <  
B. =  
C. >

## Answer Key • Lesson 5: Problem Solving with Volume

Name \_\_\_\_\_ Date \_\_\_\_\_

6. Josh put 33 cc of water and a wooden block in a graduated cylinder. The total volume with the water and wooden block is 60 cc. Sam put 45 cc of water and a small ball in a different graduated cylinder. The total volume of water and the ball in Sam's cylinder is 60 cc. Sam told Josh that the block and ball have the same volume because the total volume in each cylinder is 60 cc.

Do you agree with Sam? Why or Why not?

\_\_\_\_\_

\_\_\_\_\_

582 SAB • Grade 2 • Unit 11 • Lesson 5 Problem Solving with Volume

6. disagree, the wooden block has a greater volume; Possible response: I disagree with Sam. He put more water into the cylinder so that means his toy has a smaller volume than Josh's. The volume of the wooden block is 27 cc;  $60 \text{ cc} - 33 \text{ cc} = 27 \text{ cc}$  and the volume of the ball is 15 cc;  $60 \text{ cc} - 45 \text{ cc} = 15 \text{ cc}$ .
- 7.\* No, the bowl will overflow by 24 cc; Strategies will vary. Possible strategies:  $350 \text{ cc} - 165 \text{ cc} - 98 \text{ cc} - 35 \text{ cc} = 52 \text{ cc}$  and Joe is 76 cc so the bowl will overflow a little;  $165 \text{ cc} + 98 \text{ cc} + 35 \text{ cc} + 76 \text{ cc} = 374 \text{ cc}$  and that's 24 cc more than the bowl will hold.

7. Mark wants to fill a fishbowl for his pet, Joe the Fish. The bowl can hold 350 cc of water. The volume of the water and gravel Mark put in the fishbowl is 165 cc. He added a castle with a volume of 98 cc and a plant with a volume of 35 cc. Joe the Fish is 76 cc. Is there enough room so that the bowl doesn't overflow when Mark puts Joe the Fish into the bowl? Explain your thinking.

Miguel's Volume Problem  
Homework (TG pp. 1–2)  
Questions 1–2

1.  $72 \text{ cc} - 12 \text{ cc} = 60 \text{ cc}$ ;   $\text{cc} + 12 \text{ cc} = 72 \text{ cc}$

Name \_\_\_\_\_ Date \_\_\_\_\_

### Miguel's Volume Problem

**Homework**

Dear Family Member:

Your child is learning to read volumes on graduated cylinders. Students learned that centimeter connecting cubes are about 1 cc of volume each, so the volume of 12 cubes is 12 cc. Help your child complete the problem below.

Thank you.

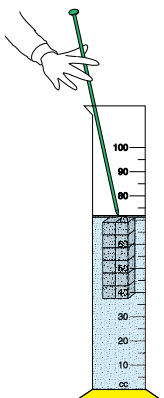

1. Miguel put 12 centimeter connecting cubes into water. The graduated cylinder reads 72 cc.

How much water is in the graduated cylinder? Write a number sentence to show how you got your answer.

**Homework Master** TG • Grade 2 • Unit 11 • Lesson 5 |

Teacher Guide - Page 1

- 2. A. 302
- B. 91
- C. 177
- D. Possible response:  $272 - 171 = 101$  and  $101 - 10 = 91$
- E. One possible response: use friendly numbers 160 and 240.  $100 + 100 = 200$ ,  $60 + 40 = 100$ , and  $200 + 100 = 300$ ; 302 is close to 300.

2. A. 
$$\begin{array}{r} 163 \\ +139 \\ \hline \end{array}$$
 B. 
$$\begin{array}{r} 262 \\ - 171 \\ \hline \end{array}$$
 C.  $326 - 149 =$

D. Chose one problem from Question 2. Show how to solve it using a mental math strategy.

E. Show or tell how you know your answer to Question 2A is reasonable.
