

# Share Equally

Dear Family Member:

In our study of division, your child has been learning to use various strategies and tools to solve fair share problems. For example, students use number lines, drawings and connecting cubes.

Thank you.

**Solve these problems. Show or tell how you solved the problem. Remember to label your answer.**

1. Kim has 21 dog treats and 7 new puppies. Kim shares the dog treats fairly among her puppies. How many will each puppy get?
2. There are 18 stickers. Share them equally among three children. How many will each child get?
3. There are 30 bales of hay and 5 elephants. Share the hay equally. How many bales of hay will each elephant get?
4. There are 15 dirty windows in the bird house and 3 cleaning men. They each clean the same number of windows. How many windows will each man clean?
