Midyear Test Review (p. 243)
Questions 1–3*. See the lesson.

Teacher Guide

Midyear Test (pp. 1–9)
Questions 1–17

Part 1

Strategies may vary.

- 88 days; $139 - 51 = 88$
- \$2,015; $1166 + 849 = 2015$
- 9015
- 2532
- 304
- Possible strategy: $2500 + 6500 = 9000$

7.
$$\begin{array}{r} 2532 \\ +1789 \\ \hline 3000 \\ 1200 \\ 110 \\ + \frac{11}{4321} \end{array}$$

- Possible strategy: From 198 count up 2 to 200, 200 from 500 is 300; $300 + 2 + 2 = 304$.

Part 2

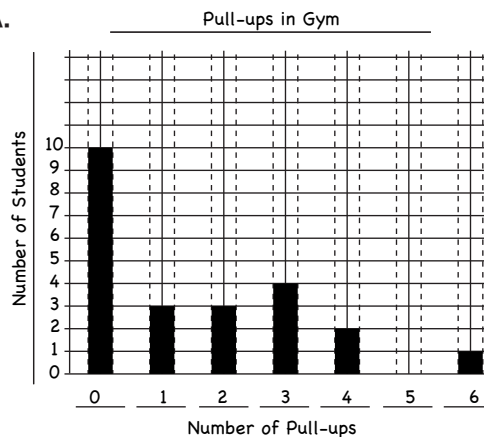

9. A.

B. 2:15

- $6 \times 4 = 24$; stories and pictures will vary.
- 1182 pounds, 1280 pounds, 1936 pounds

12. A.

- 4 students
 - 3 pull-ups
 - None or 0 pull-ups
13. A. Approx. 10–12 sq cm; students may number the squares to show how the square cm were counted.

B. Possible solution:

- A. 252
- Troy's answer is correct. Student explanations will vary.
- 153

15. A. 20;

- $4 \times 5 = 20$ or
 $5 + 5 + 5 + 5 = 20$

16. A. Coast of Candy Boxes

Number of Boxes	Cost in Dollars
1	\$2.50
2	\$5.00
3	\$7.50
4	\$10.00
5	\$12.50
6	\$15.00
7	\$17.50
8	\$20.00
9	\$22.50
10	\$25.00

B. \$10.00

C. \$17.50

D. Possible response: I used the pattern in the table. Each box of candy is \$2.50. Since 6 boxes cost \$15.00, 7 boxes will be $\$15.00 + \$2.50 = \$17.50$.

E. \$50.00; Possible response. I looked at the table and saw that 10 boxes of candy will cost \$25.00. Since 20 is the double of 10, I know that the cost for 20 boxes will be double the cost for 10 boxes. \$50.00 is double \$25.00.

17. A. $300 + 190 + 15 = 505$

B. No; ●●●●●

C. $500 + 5 = 505$
