

3-D Shapes

Mrs. Hunter told students in her class that they were going to begin learning about 3-D shapes by going on a shape hunt.

Before the shape hunt, Fern and Miguel discussed how 2-D shapes are different from 3-D shapes.

Fern

I think that 3-D shapes are different because you can fill them.

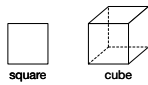

Miguel

A 2-D shape is flat and a 3-D shape is not.

Discuss 

Compare the two shapes. Tell how they are different from each other.

1.

square cube

2.

triangle triangular prism

Three-dimensional shapes have depth as well as length and width.

Student Guide

3-D Shapes (SG p. 314)

Questions 1–2

1. *Answers will vary. Possible responses: The first shape has one square and the other has 6 squares. The first shape has 4 edges and the other has 12.
2. *Answers will vary. Possible responses: The first shape has one triangle and the other has 2 triangles and 3 rectangles. The first has 3 corners and the other has 6.

3-D Shape Hunt at Home (SG p. 315)

Answers will vary.

3-D Shape Hunt at Home

Homework

Dear Family Member:

Help your child find objects at home to add to the class 3-D shape collection. See the shapes shown below. Search for as many different examples as possible. We will use the collection of shapes in class to look at properties of three-dimensional shapes and discuss their similarities and differences.

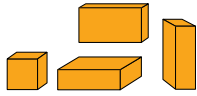

Thank you.

Search for objects at home that have these three-dimensional shapes. Find as many different shapes as you can.

sphere

cube

cylinder

rectangular prisms

cone

rectangular pyramid

triangular pyramid

triangular prisms
