

Collect

2. Find the volume of at least three containers of different sizes. Your measurements may contain some experimental error, so you should measure the volume of each container at least three times and find the median. Record your data in a table like the one below.

Container	Volume in _____ <i>(unit)</i>			
	Trial 1	Trial 2	Trial 3	Median

Find the median:

- Order the numbers from least to greatest.
- The “middle” number is the median.
