

2. Maya took a spelling test every week for ten weeks. The data table shows the number of words out of 10 she spelled correctly on each test.

A. Use connecting cubes, pennies, or blocks to find the mean number of correctly spelled words. Show or tell how you found the mean.

Test	Words Correct
Test 1	9
Test 2	6
Test 3	9
Test 4	10
Test 5	6
Test 6	8
Test 7	10
Test 8	4
Test 9	7
Test 10	7

B. Find the mean using a calculator. Show the calculator keystrokes you used.

C. Were your answers for parts A and B the same? If not, explain why they were different.
