Answer Key • Lesson 5: Workshop: Patterns

Student Activity Book

Speeds at the Indianapolis 500

Questions 1–15 (SAB pp. 162–168)

- I. About 10 hours; 500 = 50 miles \times 10 hrs.
- **2. A.** About 2 times faster; using friendly numbers: 150 is 2 times 75.
 - **B.** About 3 times faster; 150 is about 3 times 50.

- **4. A.** Estimates will vary. About 87 miles per hour. Accept estimates between 85 and 90 miles per hour.
 - **B.** Possible response: I used the best-fit line. First, I found where 1917 would be on the horizontal axis. I went up to the best fit line and then read across to the vertical axis.
- **5. A.** Estimates will vary. About 117 miles per hour. Accept estimates between 115 and 120 miles per hour.
 - **B.** Explanations will vary. (See Question 4B)
 - C. Interpolation

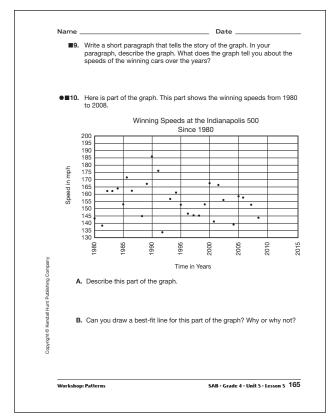

| Name_ | Date |

| Disc | |
| 1. | When Jessie's family went on a trip in their car, they drove an average of about 50 miles each hour. How long did it take Jessie's family to drive 500 miles? Show or tell how you know. |
| 2. | In 1993 the winning speed at the Indy 500 was 157 miles per hour. A. In 1911 the winning speed was 75 miles per hour. About how many times faster did the winner drive in 1993 than in 1911? |
| | B. The speed limit on freeways in cities is usually 55 miles per hour. About how many times faster did the winning 1993 car travel during the race than a car travels on a freeway? |
| lse the | Winning Speeds at the Indianapolis 500 graph to help you answer |
| | wing questions. |
| ★●3. | Use a ruler to draw a best-fit line on the graph for the years in which the points suggest a line. |
| * 4. | There were no races in 1917 or 1918 during World War I. |
| | A. Use the graph to estimate the winning speed if there had been a race in 1917. |
| | B. Explain how you made your estimate. |

I

| Name. | Date | |
|---------|--|---|
| *●5. | There were no races from 1942–1945 during World War II. A. Use the graph to estimate the winning speed if there had been a race in 1943. | |
| | B. Explain how you made your estimate. | |
| | C. Did you use interpolation or extrapolation? | |
| ●∎6. | In 1979, the yellow light rule was changed. Starting in 1979, when a yellow light is on, a pace car leads all the cars at the slower speed. The cars still maintain their positions as before, but they may not pass the pace car. Do you think the rule change made a difference to the average winning speed? Why do you think so? | |
| ●■7. | Looking at the data, what do you think might have happened in 1990? Does the 1990 data point fit more with the data before 1979 or the data after 1979? Explain your answer. | Copyright @ Kenc |
| ∎8. | A. Can you use the graph to make an accurate prediction about the winning speed in 2015? Why or why not? | Copyright @ Kendall Hunt Publishing Company |
| | B. If so, what is your prediction? | ompany |
| | C. Did you use interpolation or extrapolation? | |
| 164 sai | B · Grade 4 · Unit 5 · Lesson 5 Workshop: Patterns | |

Student Activity Book - Page 164

Student Activity Book - Page 165

- **6.** Answers will vary. After 1979, the pattern of the data points changes. They no longer fall on an obvious line. The rule change may have made a difference and, depending on the number of accidents and the weather, reduced the average speed of the winners.
- **7.** Answers will vary. Possibly there were good road conditions and fewer accidents so the average speed of the winner was faster. The 1990 data point falls roughly on the same best-fit line as the points before 1979.
- **8. A–B.** Answers and explanations will vary. Students should see that the pattern doesn't hold true after about 1980. They may make a prediction using a range. They can predict that the speed will be between 130 and 180 mph.
 - **C.** Extrapolation
- **9.** Answers will vary. Students might say that the graph tends to go uphill at a steady rate until about 1980 when the data becomes scattered. Until 1980 the winning speeds increased over the years, with the exception of the war years. After 1980 the winning speeds varied widely.
- **10. A.** Answers will vary. Students may say that the points are scattered with no visible pattern.
 - **B.** No, the points vary and do not suggest a line.

| II. A. | L | D |
|--------|-----|-----|
| | 2 | 5 |
| | 4 | 10 |
| | 6 | 15 |
| | 8 | 20 |
| | 10 | 25 |
| | 20 | 50 |
| | 40 | 100 |
| | 60 | 150 |
| | 80 | 200 |
| | 100 | 250 |
| | 200 | 500 |

- **B.** Answers will vary.
- **C.** Answers will vary. The D column is $2 \times L + \frac{1}{2}L$ or $D = L + L + \frac{1}{2}L$. When L doubles, D also doubles.

Answer Key • Lesson 5: Workshop: Patterns

12. A.

| L | D |
|---|-----|
| 1 | 90 |
| 2 | 180 |
| 3 | 270 |
| 4 | 360 |
| 5 | 450 |
| 6 | 540 |

- **B.** T goes up by ones, D goes up by 90s. D is 90 times T.
- **C.** Multiply the time by 90.

13. A. T

| <i>T</i> Time | <i>D</i> Distance in miles | <i>(T, D)</i> Ordered Pair |
|------------------|-------------------------------|-------------------------------|
| 1 | 62 miles | (1, 62) |
| 2 | 122 miles | (2, 122) |
| 3 | 176 miles | (3, 176) |
| 4 | 240 miles | (4, 240) |

B–C. Scale of graphs will vary.

14. Yes; using the graph, the line for 6 hours crosses the best-fit line at about 350 miles.

| ••11. A. A driver must of table. | complete 200 laps | to finish the race | . Complete the | |

Student Activity Book - Page 168

- **15. A.** There is not an exact pattern, but the general pattern is that the miles are about 60 times the number of hours he is driving, or about 60 miles per hour.
 - **B.** Multiply the number of hours by 60.
