A Triangle Flash Cards: Square Numbers

With a partner, use your Triangle Flash Cards to quiz each other on the division facts for the square numbers. One partner covers the corner containing the number in the circle. This covered number will be the answer to a division fact, called the quotient. The number in the square is the divisor. Use the two uncovered numbers to solve a division fact.

Separate the used cards into three piles: Facts I Know Quickly, Facts I Can Figure Out, Facts I Need to Learn. Make a list of those facts that are in the last two piles. Take the list home to practice.

There is no need to go through the cards a second time because the numbers are the same in both the circle and the square for the square numbers.

Circle the facts you know quickly on your *Division Facts I Know* chart.
