

- 2.** Frank wondered if it would be a better compliment to say he is worth his weight in \$10 bills. A \$10 bill weighs approximately one gram.
- A.** What is Frank's weight in \$10 bills worth?
- B.** What is worth more: Frank's weight in gold or his weight in \$10 bills? Show or explain how you know.

 **Check-In: Question 3**

- 3.** Professor Peabody weighs 180 pounds. He wants to know how much he would be worth in gold. He checked the price of gold and found that in the morning it was worth \$35.25 per gram and in the afternoon it was worth \$37.80 per gram. Use estimation to find the range for how much Professor Peabody is worth in gold. Show or tell how you found your answer.

1 kilogram = 2.2 pounds
