

## Choosing Units of Measure

The following are some units of measure for length: meters, centimeters, feet, inches, yards, kilometers, and miles.

Which unit of measure does it make sense to use when you measure:  
(HINT: More than one answer can be correct.)

1. the length of a book?
2. the distance from your classroom door to your teacher's desk?
3. the distance from your home to school?
4. a person's height?

---

## Making Comparisons

Compare the expressions on each side of the line. Without calculating, decide if  $<$  (less than),  $=$ , or  $>$  (greater than) goes on the line to complete each number sentence. Then show or tell how you decided.

- A.  $43 + 42 + 44$    $43 \times 3$
- B.  $231 + 231 + 231 + 231$    $5 \times 231$
- C.  $623 + 465 + 215$    $468 + 210 + 625$
- D.  $3080 \times 70$    $3008 \times 70$
