D Planting Grass

You need to cover 11,000 square feet of lawn with grass seed. A large bag of grass seed covers about 3275 square feet. A small bag covers about 1770 square feet. Show or tell how you solved each problem.

1. How many bags of grass seed of each kind do you need?

2. If a large bag costs $5.00 and a small bag costs $2.50, what does it cost to cover 11,000 square feet?

3. Can you purchase seed for the lawn for less cost? Explain how you know.
