

T Riding Bicycles

1. Jerome rode his bicycle at a steady speed. It took him 15 minutes to ride 2 miles. Make a graph that shows the distance Jerome traveled and the time it took. Put time on the horizontal axis and distance on the vertical axis. (Hint: Put a point on the graph that represents the time and distance when he starts. What distance has he traveled at 0 seconds?)

Remember to put a title on your graph.

2. How far can Jerome travel in one hour? Show or tell how you know.
