

# Divide into Columns

Solve the following division problems using the column method. The first one is an example.

Example:  $439 \div 6 = \underline{73 \text{ R}1}$

	3	3	3	3	3	3		
	3	3	3	3	3	3	Into the Columns	Left to Divide
	20	20	20	20	20	20	18	$19 - 18 = 1$
	50	50	50	50	50	50	120	$139 - 120 = 19$
							300	$439 - 300 = 139$
	1	2	3	4	5	6		

1.  $909 \div 4 = \underline{\hspace{2cm}}$

							Into the Columns	Left to Divide
	1	2	3	4				

2.  $365 \div 9 = \underline{\hspace{2cm}}$

												Into the Columns	Left to Divide
	1	2	3	4	5	6	7	8	9				

Name \_\_\_\_\_ Date \_\_\_\_\_

3.  $1117 \div 6 =$  \_\_\_\_\_

1	2	3	4	5	6

Into the Columns	Left to Divide

Draw a column model to help you solve the following problems.

4.  $5982 \div 5 =$  \_\_\_\_\_

5.  $8463 \div 3 =$  \_\_\_\_\_
