

Divide into Columns

Solve the following division problems using the column method. The first one is an example.

Example: $439 \div 6 = \underline{73 \text{ R}1}$

3	3	3	3	3	3	
20	20	20	20	20	20	18
50	50	50	50	50	50	120
1	2	3	4	5	6	300

Into the Columns	Left to Divide
	$19 - 18 = 1$
	$139 - 120 = 19$
	$439 - 300 = 139$

1. $909 \div 4 = \underline{\hspace{2cm}}$

1	2	3	4

Into the Columns	Left to Divide

2. $365 \div 9 = \underline{\hspace{2cm}}$

1	2	3	4	5	6	7	8	9	

Into the Columns	Left to Divide
